### Peak output

In the range of models with 4-pin M8 connector, some versions are available with a digital output channel which is automatically enabled by the device when the jaws exert the gripping force. This will work like an integrated proximity sensor which can operate independently of the final position of the jaws, and therefore with no adjustment.

### PNP/NPN versions

Grippers are available in the standard version with PNP input and in the N version with NPN input.

### Starterbox includes:

- Mechatronic gripper of your choice
- Adapter plates
- Cables with plug
- Software stick for UR
- Covers
- Gripper fingers
- Screws
